TripNest AI: Epics

Version 2.0 · 2 November 2026 (location-first redesign). Active scope: **tourist crowd prediction** and **smart destination recommendation**. Removed modules are listed under Future scope and have no epics.

Epic	Title	Goal	Business requirements	Stories	Status
EPIC-001	Tourist Crowd Prediction	A traveller can see how crowded a place will be on a chosen date and time of day, with a four-part timeline, the calmest hour, uncertainty and clear data provenance, from a model evaluated against baselines	BR-001, BR-004	STORY-001 to STORY-007	Done, verified by tests
EPIC-002	Smart Destination Recommendation	From their location, a traveller sees popular places nearby and calm, lesser-known hidden gems, chosen with the predicted crowd on their date and their interest, on an interactive map	BR-002, BR-004	STORY-008 to STORY-015	Done, except the compare screen (API only)
EPIC-003	Essential Platform Infrastructure and User Experience	A simple, photo-led, responsive product (home, results, details) on a clean catalogue with stored, credited photographs, and clear loading, error and empty states	BR-003	STORY-016 to STORY-021	Done, verified by tests
EPIC-004	Testing and Deployment	Automated tests, secure configuration, public deployment and a complete document set	BR-004, BR-005	STORY-022 to STORY-025	Partly done: deployment not yet performed

Business requirements

ID	Requirement
BR-001	Help travellers avoid overcrowded destinations by predicting crowd level for a date and time.
BR-002	Recommend destinations that suit the traveller and the predicted crowd, not just popular ones.
BR-003	Be simple to use, with no registration needed for discovery or prediction.
BR-004	Be honest: label demonstration data, show freshness, uncertainty and limitations; never invent live data.
BR-005	Be publicly accessible and reproducible for demonstration.

Future scope (not active requirements, not implemented)

Itinerary planner · community, posts and comments · reviews and sentiment analysis · weather dashboard · accounts, profiles and favourites · authority and admin dashboards · local business listings and marketplace · bookings and payments · real-time sensor or ticketing feeds. The code for several of these is kept on disk, unmounted, and is not part of the product.
